

FROM PUBLIC SIGNAL TO CREDIBLE OUTREACH

Find the right technical conversation before sending the first message.

UpSearch helps students research real engineering problems, identify useful contacts, and draft specific outreach without mass messaging or fabricated experience.

Real utility

Multi-agent orchestration

Human approval

W&B experiment tracking

Cold outreach is usually backward.

Students start with a generic message and hope it lands. UpSearch starts with evidence: a company, a public technical signal, and a realistic reason to reach out.

01

Research

Find real public signals from companies and technical communities.

02

Match

Compare opportunities against an honest student profile.

03

Draft

Create one specific email or LinkedIn note under clear rules.

04

Approve

Keep a human in control before any external message is used.

Utility

Creativity

Two workflows. One research-to-reach system.

UpSearch Architecture

Two workflows, one frontend, explicit human approval

DATA INPUTS

profile.txt

Manual user profile

Skills, coursework, interests, and goals

Public Reddit + Hacker News

Live public research signals

Used for opportunity discovery and contact research

Public LinkedIn / GitHub URLs

Suggested target-contact profiles

Manual verification required before outreach

Your LinkedIn profile is not fetched automatically. Personal data comes from profile.txt.

Opportunity OS

Build a deeper company packet, maintain a CRM, and review

Designed for useful automation, not autonomous spam.

Backend

- **FastAPI** exposes Quick Search and Opportunity OS routes.
- **SSE progress updates** show packet stages live.
- **SQLite CRM** stores packets, contacts, and approval records locally.

Technical Execution

Responsible Design

Guardrails

- **profile.txt** keeps personal data explicit and editable.
- **QA checks** flag weak claims, tone issues, and long drafts.
- **Human approval** is required before outreach is used.

Local records with no automatic

W&B turns outreach into an experiment you can improve.

Every logged Quick Search run captures the lead, fit score, word count, send status, supervisor quality scores, and the final draft artifact.

Agent Orchestration

Specialized agents pass structured outputs into the next stage.

Utility

Students reach out with evidence instead of generic messages.

Technical Execution

Live data, SSE updates, provider routing, QA, and local CRM storage.

Creativity

Cold outreach becomes a research workflow rather than a volume game.

Sponsor Usage

W&B tracks what gets replies so the workflow improves over time.

UpSearch: better research, more credible outreach, and a human decision at the final step.
